

MEDIA RELEASE

ANSUL[®] shows premium fire suppression systems at QME

Ansul will showcase its vehicle fire suppression systems on **Stand 7127** during the 2008 Queensland Mining and Engineering (QME) exhibition at the Mackay Showground from July 22-24.

ANSUL vehicle fire suppression systems were developed in the 1960s. Since then, as mobile equipment has grown in size and complexity, system engineers and chemists have developed new fire detection and suppression products including Triple IR Detection and Twin-Agent Suppressing/Cooling Technology.

Covering small vehicles to large non-road equipment, ANSUL systems are used to protect excavators, haul trucks, loaders, drag lines, dozers, drills, scrapers, graders, compactors, slag pot carriers, underground mining equipment, forestry and agricultural vehicles.

ANSUL's full line of special hazard fire protection products includes fire extinguishers and hand line units, pre-engineered restaurant, vehicle, and industrial systems, sophisticated fire detection/suppression systems and a complete line of dry chemical, foam, and gaseous extinguishing agents.

For fire hazards found in industrial settings, ANSUL has dry chemical systems to provide the flexibility based on the size and configuration of the application. Both systems provide automatic or manual operation and detection/alarm/release capabilities.

Customers can also choose from the I-101 Industrial Fire Suppression Systems or ANSUL large piped system for the protection of paint spray booths, dip tanks, flammable liquid storage, loading racks, offshore platforms, tanker decks, fuelling area, steel mills and many other applications.

ANSUL is a premium brand of Tyco Fire and Security's fire suppression business unit.
