ESS offers bulk handling solutions at QME

ESS will display its solutions for common bulk handling problems through custom designed systems on **Stand 1030** during the 2008 Queensland Mining and Engineering (QME) exhibition at the Mackay Showground from July 22-24.

One recent problem ESS solved was on a high-speed, high-tonnage belt at a Queensland alumina refinery with an engineered redesign of a fully integrated belt-cleaning system. It featured its Keysafe and Quicksafe products, providing safe and rapid maintenance while delivering consistent and exceptional cleaning on previously difficult-to-clean belts.

ESS identified the problem then designed a system with the client's input and benchmarks. The system also featured the flexibility to adjust blade configurations to varying conditions.

ESS also manufactured, supplied, installed, commissioned and now maintains the systems to a level beyond the client's initial expectations.

As well, ESS aims to provide total material control at conveyor transfer points for increased output, reduced clean up and maintenance costs and improved plant safety.

ESS also offers installation, inspection and maintenance services. Products include conveyor belt cleaners and sealing systems, belt training devices, impact cradles, sealing and support bars access doors, and conveyor transfer points.
