WASP offers fresh approach to power generation at QME

WASP Diesel will explain how its fuel-focused approach to diesel and gas-powered generators can create significant financial and environmental savings on **Stand 1014** during the 2008 Queensland Mining and Engineering (QME) exhibition at the Mackay Showground from July 22-24.

WASP's technology is suited to remote mining applications such as camps, with the company focused on selecting the most fuel efficient engine for each customer's application.

The privately owned company sells and rents generators, compressors and welders. It exclusively imports the John Deere-powered range of Sullair Diesel Compressors and at QME will demonstrate these as well as Denyo generators and welders.

"Most people are unaware that well over 90% of the cost of running a diesel generator is fuel," WASP's Craig Cusack said.

"Essentially, the capital or rental cost of generators becomes less relevant when the fuel is flowing.

"Significant fuel savings can be achieved using our approach."

In addition, WASP's approach also had a major environmental benefit by substantially reducing carbon and CO₂ emissions.

WASP will be offering visitors to its QME stand complimentary refreshments and giveaways.
