United Fasteners offers corrosion protection at QME

United Fasteners will show off Zinga's liquid galvanising corrosion protection on **Stand 2033** during the 2008 Queensland Mining and Engineering (QME) exhibition at the Mackay Showground from July 22-24.

The environmentally safe Zinga is said to be the only organic zinc-rich coating that provides a level of cathodic protection comparable to hot-dipped galvanising or inorganic zinc-rich coatings. It is a standalone coating system or primer for use under the Zingametall range of topcoats.

Usually requiring just two coats an hour apart, Zinga is cost-effective to apply and will thin over the years in the manner of an anode that it is until time for rejuvenation. Zinga then requires just a water-blast and reapplication of a single coat to rejuvenate it. In typical environments one application will last 40 years.

Zingametall products, distributed by United Fasteners, also include high quality moisture cure urethanes (MCU), ceramic-filled epoxies, UV-resistant acrylic, polyaspartic and the Zinga Liquid Coating, all of which are complemented by United Fasteners' Chlor*Rid range of soluble salt testing and removal technology.

United Fasteners was established in 2001 in Brisbane and Mackay and has since opened offices in Gladstone, Adelaide, Perth and Melbourne.

It specialises in the distribution of engineering fasteners in both mild, high tensile and stainless steel and more exotic materials such as Duplex and Super Duplex stainless, nickel and copper alloys and Durehete.

Mill certificates, chemical analysis and mechanical tests can be provided on all components as required.

United Fasteners also provides a range of associated engineering supplies including drills, taps and dies, hand tools, abrasives, air tools and power tools.

United Fasteners is the only Australian fastener distributor to employ a chartered professional engineer for design, application and sourcing of fasteners. United Fasteners is also implementing a quality management system to ISO 9001.
